# README.md

# Zoya AI – JavaScript Full Project

This is a browser-first working project, not an APK.

## Run

Open index.html through a local web server or GitHub Pages. Camera and microphone permissions are more reliable on HTTPS/localhost.

## API

`app.js` has `CONFIG.apiEndpoint`. Keep private API keys on a server, never inside browser JavaScript.

Expected POST body:

```
{"message":"Hello","assistant":"Zoya"}
```

Expected JSON:

```
{"reply":"Hello! ■■■ Zoya ■■■■"}
```

## Important limits

Browser JavaScript can handle chat UI, speech APIs where supported, localStorage, camera permission and web links. Real Android call handling is not possible.

## Identity

Original assistant name: Zoya AI.

"Jarvis" may be used only as a comparison/style reference; it is not the assistant's name.
